Introduction and Experience

karpatkey is a DeFi-native organisation specialising in professional DAO finance through industry-leading research and tooling since 2020. We've been working with [GnosisDAO](#), [Balancer](#), [ENS](#), [CoW Protocol](#), and [Lido](#) on financial planning, operations, and strategy, diversifying their treasuries into sustainable portfolios of DeFi investments designed to support DAOs in executing their missions.

Why karpatkey

The Arbitrum DAO is well-positioned to lead by taking community-driven governance initiatives and turning them into highly impactful programs that strengthen the protocol's future.

At karpatkey, our governance team taps our network of engineers, DeFi strategists, data/financial/quant analysts, and accountants for subject matter expertise. As DAO treasury developers and contributors to some of our industry's most reputable DeFi protocols, our team has the knowledge, trust, and alignment to contribute to Arbitrum's growth moving forward meaningfully.

We pride ourselves on being hands-on delegates in our areas of expertise and upholding our [core values](#) in every area of our participation.

In addition to our well-known DeFi and Treasury-related skills, we are interested in making an impact in broader DAO governance discussions, such as delegate incentive programs as discussed in [\[RFC-2\]](#) and taking a more active role in the [Arbitrum Incentive Program Working Group](#). Our governance team is already attending the weekly Arbitrum calls, recently attended [DAO Day](#) spaces, and is committed to increasing involvement.

Delegate Communication Intent

This thread will provide regular updates to the community to ensure transparency and fully communicate our rationale as delegates. These updates will include our explanation for voting and may consist of other announcements related to our activity as an Arbitrum delegate.

Disclosure

We are active contributors to the governance of other protocols, such as AAVE, Uniswap, and Safe. We also manage treasuries or serve on treasury committees for protocols such as Balancer, GnosisDAO, and ENS, and we hold multiple crypto assets in our own treasury. More information is freely available on our [treasury reports](#).

Waiver of Liability

By delegating to karpatkey, you acknowledge and agree that karpatkey will participate on a best-efforts basis and will not be liable for any damages related to participation in the Arbitrum Protocol or this DAO.
