

Social Providers Overview

This section relates to setting up oauth providers inside Dynamic. You would do this for two purposes:

1. To allow [linking of social accounts](#)
2. as part of their profile.
3. To allow users to [sign up or log in with social accounts](#)
4. .

In both cases you will need to configure whatever social providers you want to use. Dynamic supports the following providers:

- [Facebook](#)
- [Google](#)
- [Twitter](#)
- [Twitch](#)
- [GitHub](#)
- [Discord](#)
