

[Enhanced Sagittarius Engine

](<https://forum.makerdao.com/t/enhanced-sagittarius-engine/22136>) As a central Liquidity, Profit and Governance asset.

We propose to unify the

[POL (MKRETH)

](<https://forum.makerdao.com/t/why-dai-must-stop-being-mkrs-liquidity-pair/22006>), making this a BTP8020

(80MKR20ETH), along with the SE module

([Enhanced Sagittarius Engine](#)), both being the same token 80MKR20ETH.

- Avoid liquidity fragmentation
- Have MakerDao POL retain ESE benefits.
- Metapools

: will benefit from ALL aspects of ESE

, as a central Liquidity, Profit and Governance asset \* Tvl increased by incentives

- Quality of Allocator governance increased by TVL
- Tvl increased by incentives
- Quality of Allocator governance increased by TVL

Final conclusion:

Enhanced Sagittarius Engine (ESE) will have profit from:

- MakerDao Fees
- Lockup Exit Fee (Rewards from bribes)
- Swap Fees
- Bribes Rewards
- Subdaos Token Farming

Also including:

- Voting Power
- Borrowing Power

ESE

, as central Liquidity

, Profit

and Government

; It can become the most interesting asset in the ecosystem.

ESE's profit will impact MakerDao's treasury, with the LP being POL; and each SubDao being the central component of the Metapools to come. In addition to strengthening the diversification and growth of voting power for governance that grows organically and decentralized.
