

As we all know, Yuga is planning to create a metaverse game that relies heavily on frequent NFT transactions. However, the high gas fees on the Ethereum network make it difficult for game-related NFTs to achieve frequent trading. Yuga once considered creating its own public chain to solve the problem of high transaction fees, but it was ultimately abandoned because most community members did not want to leave the Ethereum ecosystem. With the rapid development of Ethereum L2 solutions today, is Yuga reconsidering building its own Ethereum L2 public chain to achieve its grand vision for the metaverse game? This would not only allow them to stay in the Ethereum ecosystem but also solve the problem of high transaction fees.

If anyone has insider information or more interesting ideas, they are welcome to discuss them here.

Proposals submitted to the AIP Ideas category can be vague, incomplete ideas. Topics submitted here are not required to be submitted as a formal AIP Draft Template, however, you may still use the [template](#) if you wish.
