

tensor.gather_elements

...

```
Copy fngather_elements(self:@Tensor, indices:Tensor, axis:Option)->Tensor;
```

...

GatherElements is an indexing operation that produces its output by indexing into the input data tensor at index positions determined by elements of the indices tensor.

Args

- self
- (@Tensor
-) - The input tensor.
- indices
- (Tensor
-) - Tensor of indices.
- axis
- (Option
-) - Axis to gather_elements on. Default: axis=0.
-

Panics

- Panics if index values are not within bounds [-s, s-1] along axis of size s.
-

Returns

A newTensor .

Example

...

```
Copy usecore::array::{ArrayTrait,SpanTrait};
```

```
useorion::operators::tensor::{TensorTrait,Tensor,U32Tensor};
```

```
fngather_elements_example()->Tensor { lettensor=TensorTrait::new( shape:array![3,3].span(), data:array![[1,2,3],[4,5,6],  
[7,8,9]].span(), ); letindices=TensorTrait::new( shape:array![1,2,0].span(), data:array![2,0,0].span(), );
```

```
returntensor.gather_elements( indices:indices, axis:Option::None(()), ); }
```

```
[[4.8.3.] [7.2.3.]]
```
