

Hyperledger Besu for public networks

Besu serves as an [execution client](#) on public proof-of-stake Ethereum networks such as Ethereum Mainnet, Goerli, and Sepolia.

You can also run Besu using proof of work on [Ethereum Classic \(ETC\)](#).

Get started by [installing Besu](#).

Architecture

The following diagram outlines the high-level architecture of Besu for public networks.

If you have any questions about Besu for public networks, ask on the [besu channel](#) on [Hyperledger Discord](#). [Edit this page](#)
