

# Sign with EOA

[##](#) [Ethers JS](#) This section showcases two ways you can create Smart Accounts using Ethers JS. Using Private keys or using a Signer Object from a browser injected EOA. Note this is not a full implementation but a recipe to use and add to your existing projects. See our tutorials for full context on how this can be used. [##](#) [Viem](#) This section shows how to use Viem to create a Smart Account with Biconomy. If you would like to simply see a code implementation, one is available [here](#) which showcases how to create a smart account as well as execute a gasless transaction with Viem. [##](#) [WAGMI](#) This section shows how to use Wagmi React Hooks to create an Account with Biconomy. If you would like to simply see a code implementation, one is available [here](#) which showcases how to create a smart account using Wagmi. [Previous Description](#) [Next Ethers JS](#)
