

Hello Maker Community,

We would like to inform you that the Goerli Testnet has not mined any blocks in the past twelve days. You can view the status here: <https://goerli.etherscan.io/blocks>

This situation technically prevents the dev teams from properly crafting the next Goerli spell. Consequently, we will be forced to skip Goerli-related steps for all upcoming spells, starting from the spell scheduled on 2024-03-26.

Fortunately, we've already been working to transition from Goerli Testnet to a different system. We are preparing [MIP102c2-SP32](#) proposal to amend MIP16 and our dev teams have already established a process to use Tenderly as a replacement. This transition was initiated in anticipation of the ratification of Goerli's deprecation.

The purpose of this post is to communicate the current situation to the community and explain the exceptional reasons behind the initiation of Goerli Testnet deprecation procedures before the formal presentation and voting on MIP102c2-SP32.

Thank you for your understanding, and please feel free to comment with any questions you may have
