

Hello guys, I noticed from recent reporting that AAVE has \$50M in treasury assets, given the current market conditions, AAVE/ETH (-85% since All-time-high) and AAVE/USDC (-93% since All-time-high) are both at a 2-year low, do you think it would be wise to consider some AAVE token buyback?

Reasoning is simple: I believe AAVE token is grossly undervalued right now. Especially AAVE/ETH has been around this bottom level since beginning of 2022.

What do you guys think?
