A fake [@IO_GMX](#) account is imitating the real [@GMX_IO](#) and trying to scam people with promises of airdrops and the like.

Please report them, and don't be foolish enough to fall for it. There will never be a GMX airdrop. Don't get your wallet hacked. Just report & block the page. <https://t.co/T2h1MM1lYd>

[@Jonezee](#)

Made this tweet earlier, as many accounts who have interacted with [@GMX_IO](#)

on twitter were targeted in this "Airdrop" scam, conveniently around the time of meme and airdrop hysteria.

These fake accounts are becoming increasingly clever and savvy in the approach of their attacks.

Simply put, having a blue check verification or even better (ideally) a gold check, which is unique to "businesses" would set us apart.

I understand that this may not be possible given that the Twitter handle/account holder would have to be Doxxed in some capacity to verify. Eg. Phone Number, or for the higher business verifications probably more elaborate details and I don't believe that would be possible for a decentralized protocol, specifically one operated by anonymous devs.
