

I have read in uniswap blog, that was mentioned that

the governance treasury will retain 43% [430,000,000 UNI] of UNI supply to distribute on an ongoing basis through contributor grants, community initiatives, liquidity mining

, and other programs.

They will distribute that on several period, so many people believe that the addresses which can claim 400 UNI airdrop will get another UNI in the future which is every year until 2024 if I am not mistaken.

So, could the team explain who contributor grants, community initiatives and liquidity mining

are? is it included the people who already can claim 400 UNI airdrop before? Elaborate more please. Thanks in advance
