

gm Fam!

The founders of several solid projects such as [Sablier](#), [Axal](#), and [Si3](#) reached out to me stating that they're unable to connect their wallets in order to post on forum. They all have AIP Drafts that they would like to share with the community, but are unable to post on forum, because the wallet connect feature is not working properly, and they all own \$APE in the wallet that they're connecting. This needs to be fixed asap!

Also, my friends over at [Hats Protocol](#), one of my favorite DAO tools; they specialize in bringing roles onchain, which can be revoked due to inactivity. They are lead by some of the top devs in the Ethereum space such as [Spencer Graham](#), and Hats Protocol is interested in partnering with us as well, and I want to make sure that they can submit their AIP Draft soon.
