

Background:

The proposal to deploy Uniswap V3 on Gnosis Chain has been approved by the community since April 2022.

[Link to previous discussion](#)

[Link to Temperature Check Snapshot](#)

[Link to Consensus Check Snapshot](#)

However, it has been put on hold because the proposed bridge provider (Nomad) is no longer an option

[link](#).

Proposal:

Gnosis team proposes moving forward with the deployment using Wormhole as the bridge provider for the governance.

As a refresher, Wormhole was just voted in as the cross-chain governance provider on BNB chain with over 66% approval.

There are some points ongoing about multi bridge deployment. We will be in support and in line with the community if and when such solution is approved by the [Assessment Committee](#)

Summarizing

the arguments for this proposal:

- Gnosis Chain has already been voted in as of April 2022 and was already meant to have a Uniswap V3 deployment.
- Wormhole contracts are live and the bridge has already been approved by the community for another major deployment (BNB chain).

Therefore we feel very confident that this would be the right step forward in deploying Uniswap V3 on Gnosis chain.
