

Using the binaries

Once installed, you should have the following binaries:

Binary Description
namada The main binary that can be used to interact with all the components of Namada
namadan The ledger node
namadac The client
namadaw The wallet
namadar The ethereum bridge relayer
The main binary namada has sub-commands for all of the other binaries. Therefore, the following commands are equivalent:

namada command namada x equivalent namada client namadac namada node namadan namada wallet namadaw namada relayer namadar
To explore the command-line interface, the `--help` argument can be added at any sub-command level to find out any possible sub-commands and/or arguments.
