

Hey! Sorry I missed the call today.

I think I generally have some confusion about what governance exists on-chain for Celestia vs not. Most of the explanations I've heard from core team members and the docs I've read suggest that governance is fully off chain.

But this doc indicates that some parameters are changeable by governance. If governance is implemented by "rough consensus" off chain, what does it mean that some parameters are changeable by governance and others are not. Presumably off-chain governance can do whatever it wants by hard forking.

Sorry for my general ignorance here!
