

Lido DAO, the proposal to add FreshLIDO as a node operator is live and can be found here:

- Organization name:

FreshLIDO

- Organization website:

Temporary site (we will have a FreshLIDO specific one, such as [FreshLUNA.com](https://freshluna.com)) <https://mitera.net>

- Organization Github:

github[.]com/Gaia

- Organization social channels:

[Twitter] [twitter\[.\]com/wholesum](https://twitter.com/wholesum)), [Telegram] ([t\[.\]me/onegaia](https://t.me/onegaia))

→ (limit of 2 links for new user's posts)

- Organization location:

Netherlands

- Organization size:

2-10

- Brief description of organization:

FreshLIDO is part of the Fresh\* family of validators, operated by Mitera BV, a private investment fund established in 2014.

- Brief description of performance track record:

Our fund started investing in crypto assets in 2014, in 2016 we began operating some maternodes, in June 2018 we started validating on Tezos, and currently we validate on over a dozen other chains.

- Overview of supported networks:

Tezos, Terra, Cosmos, Secret Network, Akash, Avalanche, MATIC, NEAR, Skale, Harmony, QTUM, ETH2

- Motivation for application:

Liquid staking prevents stake centralization towards lower fee providers, such as exchanges and it is a necessary component of a healthy PoS ecosystem. Our assessment is that Lido is the most advanced ETH2 staking protocol with which this goal can be accomplished, e.g., more decentralization.

- Security set up for ETH staking:

We are already running ETH2 privately on dozens of validators on a mix of cloud and baremetal nodes. Our validator's addresses can be provided upon request. Here is one of them:

- History of participating in ETH testnet:

We participated in several ETH testnets, not to mention in the original ICO.
