

# DomoDAO

DomoDAO is the Staking apparatus for Manifold Finance

[See the github repo here](#)

## Incentives

Technically due to the way the payouts are structured the first 30 days would have zero eligible payouts: meaning there is no incentive to stake. We must vote on the amount to payout for staking, ergo we are formally proposing a matching payout for sushiswap's first month which means 250,000 of FOLD will be paid out as valued for the last 7 dma as taken on 12/1/21.

- 250,000\$ of FOLD valued using the 7 Day Moving Average as measured on 12/1/21 for the first staking period that starts on 12/1/21 for 30 days.

## Sushi Relay

Sushi Relay has had some operational fixes during testing, Will go live in the next couple days. Here is a glimpse of the dashboard, which is not currently public. We will make available a dashboard similar to this that will have metrics more useful for end users (such as transactions per hour, how many transactions are processed that have been arbitrated vs just sent, etc).

## Voting for Staking Incentives

- Yes on 250k Incentives for first Month for Staking
- No, we want more than 250k for Incentives
