

I made a link directory of all testnet faucets for Kovan, Rinkeby, Goerli and Ropsten. It monitors liveliness and shows details like drop size and type of sybil protection, so you can get directly to those that are currently working. Let me know of faucets not listed and I will add them.

→ <https://faucetlink.to>

If you have spare testnet coins, please send some to the faucets with low balance to keep them going. Most that don't work are just empty but actually work fine...
