

One thing I'd love to bring forward to everyone is security. Please be safe out there, as we all await announcements there will be many scammers being creative and trying to take advantage. Grab a ledger, store your prized possessions in the ledger. If you need to connect to a dapp that requires your NFT, please do as much research as possible. Afterwards, transfer that NFT to the hot wallet, connect and then transfer back to your ledger immediately after. Another thing you can do regularly is go on revoke dot cash, or etherscan to revoke access to what you've connected to or bought. A great way to also do this in your phone using metamask is clear privacy data/cancel all signature under security and privacy in metamask. However, I do not recommend solely using metamask for this space on your phone. Please be safe out there and if anyone has any helpful tips to help lookout fellow apes, please comment below!
