Morpho Blue Whitelisted Markets

As a reminder, Morpho Blue has a permissionless market creation mechanism, where anyone can create a market with a different collateral token, borrowable token and oracle (IRM & LLTV are allowed by governance).

Such as Uniswap, you can be vulnerable to loss of funds if you use a random market where the oracle or the tokens involved in the market can be dumb. So, we recommend you use only the whitelisted markets that are listed in the [Morpho Interface](#).
