

We are proposing a number of significant updates to the Lido Oracle.

1. Oracle smart contract

. Proposed upgrade includes multiple changes to make it cheaper and easier in operations. You can take a look at [on Lido github](#) or read more on improvements in the [Lido Improvement Proposal docs](#). The code is undergoing external audit at the moment and could be ready for release over the next week.

1. Oracle daemon

. To use the changes in the smart contract, the daemon should be updated as well. Along with new ETH2 Oracle updates, we propose bundling in the support for the new feature: stETH price oracle.
