

Hi team, I hope everyone is well!

Following the proposal made by [@Ivan_Protofire](#) ([Safe \(ex. Gnosis Safe\) deployment on Holesky](#)), we are moving forward to the 2nd Quarter 2024 for Support and Maintenance, where we will continue integrating new features, providing technical support, and, of course, monitoring/optimizing infrastructure while keeping our Safe instance as up-to-date and close to Safe Global as possible.

The budget request is \$7,000 in DAI, and our estimate is to distribute it as follows:

- 50% for support and maintenance services.
- 50% to cover infrastructure costs.

Address on ETH network:

0x63d6287D5b853cCfedbA1247fBEb9a40512F709A

Our [grant](#) was segmented into 2 stages; essentially, one part was used to cover infrastructure expenses and the second for maintenance.

...Approval of up to a total of 28K DAI at which point the grant would need to be re-evaluated for further continuation...

For Q3/2024, we need to make a new request, with revised values that fit the community's needs / technical demand.

In Q1/2024, we focused on helping protocols integrate with Safe, addressing incidents in general, and performing rollouts to keep the instance updated. Below is a list of tasks we worked on:

- User cannot send transactions while connecting through wallet connect to holesky safe
- SSV team is facing issues when trying to send large tx sizes
- Integrate Tool - Tenderly
- Holesky Safe Update - Roll Out #10
- SSV reports errors originating in holesky-safe
- Change tracing_node_url for Holesky
- Holesky indexes transactions poorly
- Holesky Isidoros request - The Safe SDK could not be initialized. Please be aware that we only support v1.0.0 Safe Accounts and up
- SSV Ilya Request - Safe does not return receipt
- SSV - Failing Transaction even though Tenderly Simulation went through
- SSV - WalletConnect expired session issue

- SSV - Cannot connect from Holesky Safe to SSV via walletconnect
- RDS connection issue due to increased traffic
- Holesky Safe Update - Roll Out #11

Cheers!
