

Hey everyone!

[@ainsley](#) and [@fredfortier](#) will be leading a workshop today at 11 AM PST

as part of the [Erasure hackathon](#). This talk will describe the architecture of the Enigma network, provide some example applications, give an overview of technical resources Enigma provides, and do a deep-dive into a complete application (a coin-mixer for Ethereum built with Enigma). The Enigma network can also replace commit-reveal mechanisms and enable granular access-control, which are of particular interest to Numerai use-cases.

The team will also discuss these potential applications and propose some really cool project ideas.
