

Hello,

I have been trying to claim my secret rewards or add SEFI Token to my KEPLR wallet.

All the transactions fail with a Network Error. I have made sure that there is enough SCRT balance to compensate for the GAS fees, tried different GAS charges but nothing is working for the last 3+ days.

Initially I thought that this could be cause of the network congestion but it has not been fixed for days now.

I have been able to deposit SCRT to my wallet from my binance account, but any network transactions are not going through with my wallet.

I use Brave browser and the KEPLR extension.

I get a message of 'Tx Failed. Network Error' for any transaction I attempt.

My scrt address is secret10lrmxs3uyycg3r5p9u9e0jutf4ezyx2jjmea6e

Any help is much appreciated.

Thank you!
