

# CDK Stack

The folder [./cdk-stack](#) contains some projects, too:

- cdk-validium-contracts
- : This contains the contract modifications for removing the CDK DAC signing attestations and adding the Blob commitments.
- cdk-validium-node
- : This contains the modifications for submitting Sequence batches to NEAR, and passing the commitment data through to Ethereum.

Note eventually, cdk-validium-node will become its repository, heavily leaning on `onda-rpc-go` as a package. [Edit this page](#) Last updated on Dec 12, 2023 by oscarabé Was this page helpful? Yes No
