

Secret Toolkit

This Rust package is a collection of sub-packages that contain common tools used in development of [Secret Contracts](#) running on the [Secret Network](#) .

While the packages in this repository are designed with Secret Network's runtime in mind, some of them may work well with the vanilla [CosmWasm](#) libraries and runtimes as well, or only require minimal modifications to be compatible with them.

See usage and docs at: <https://github.com/scribblelabs/secret-toolkit> [Previous Smart contract - Tools/Utils](#) [Next CW-Plus](#) Last updated 10 months ago
