

Basic instructions

To compile release version of the smart contract you can run a build script (specified in package.json for your project as { build: near-sdk-js build, ... }):

npm run build info The above build command seeks aindex.js file in /src and outputs acontract.wasm file in a newly created/build folder at the same level as/src . For more information, see the [source code for the CLI commands here](#) . [Edit this page](#) Last updated on Jan 20, 2023 by Dennis Was this page helpful? Yes No
