

Install binary distribution

Prerequisites

- [Java JDK](#)
- version 11 or higher.
- [libsodium](#)
- is required if using [kalium](#)
- instead of the default [tinacl](#)
- NaCl implementation. See the [libsodium installation docs](#)
- or install using [brew](#)
- (macOS only):
- brew install libsodium

Install binaries

Download and unpack the latest tessera-dist.zip|tar distribution from the [ConsensSys/tessera repository](#) :

```
tar xvf tessera-[version].tar tree tessera-[version] tessera-[version] |—— bin | |—— tessera | |—— tessera.bat |——  
lib |—— HikariCP-3.2.0.jar ... Verify the installation with the help command:
```

./tessera-/bin/tessera help You can optionally add the tessera script to path:

```
export PATH=PATH:tessera-[version]/bin tessera help
```

Supplement the distribution

You can add functionality to a distribution by adding .jar files to the /lib directory.

Add Tessera artifacts

Download and unpack the artifact:

```
tar xvf aws-key-vault-[version].tar tree aws-key-vault-[version] aws-key-vault-[version].tar |—— lib |—— annotations-  
2.10.25.jar ... Copy the contents of the artifact's/lib into the distribution/lib (resolve any version conflicts or duplicated .jar files  
introduced during the copy):
```

```
cp -a aws-key-vault-[version]/lib/. tessera-[version]/lib/ Edit this page Last updated on Oct 9, 2023 by dependabot[bot]  
Previous Run Tessera from Docker image Next Build from source
```
