

Querying orders

The Flood API exposes some convenient methods for fetching past orders and streaming order updates as they come in. Both methods return an enhanced Order object with some additional metadata like the current status of the order, timestamps for creation, deletion and fulfillment, and others.

Fetching past orders

This method will return all orders with a given address as the offerer.

API Typescript curl

'https://arbitrum.flood.bid/orders/list?address=YOUR_ADDRESS'

Streaming orders

This methods will return a SSE stream of orders with a given address as the offerer.

API Typescript curl

'https://arbitrum.flood.bid/orders/stream?address=YOUR_ADDRESS' Last updated on February 3, 2024 [Create orders](#)
