

Hi, I had a look at the price of EURC/USD pair on DYDX which is currently showing an incorrect Oracle feed on DYDX. The price on all major exchanges is \$1.08 while it is \$1.01 on DYDX. Further investigation led to the root cause being Bitstamp which has price of \$0.95 caused by a \$25 trade today which is the only trade that had happened in last 24 hrs. I believe exchange with such low liquidity needs to be immediately removed to prevent any negative impact/price manipulation.
