

Install Prometheus

Download and Unpack [Prometheus](#) latest release of Prometheus:

...

```
Copy sudo apt-get update && apt-get upgrade wget
https://github.com/prometheus/prometheus/releases/download/v2.30.0/prometheus-2.30.0.linux-amd64.tar.gz tar xzf
prometheus-*.tar.gz cd prometheus-
```

...

The following two binaries are in the directory:

- Prometheus - Prometheus main binary file
- Promtool
-

The following two folders (which contain the web interface, configuration files examples and the license) are in the directory:

- Consoles
- Console_libraries
-

Copy the binary files into the /usr/local/bin/ directory:

...

```
Copy sudo cp ./prometheus /usr/local/bin/ sudo cp ./promtool /usr/local/bin/
```

...

Set the ownership of these files to the prometheus user previously created:

...

```
Copy sudo chown prometheus:prometheus /usr/local/bin/prometheus sudo chown prometheus:prometheus
/usr/local/bin/promtool
```

...

Copy the consoles and console_libraries directories to /etc/prometheus :

...

```
Copy sudo cp -r ./consoles /etc/prometheus sudo cp -r ./console_libraries /etc/prometheus
```

...

Set the ownership of the two folders, as well as of all files that they contain, to our prometheus user:

...

```
Copy sudo chown -R prometheus:prometheus /etc/prometheus/consoles sudo chown -R prometheus:prometheus
/etc/prometheus/console_libraries
```

...

In our home folder, remove the source files that are not needed anymore:

...

```
Copy cd .. && rm -rf prometheus-*
```

...
