

# How to deploy an NFT smart contract and enable credit card and cross-chain payments with no-code

Community member contribution Shoutout to [@rohit-710](#) for contributing the following [third-party document](#) ! [Crossmint](#) is an enterprise-grade web3 development platform that lets you deploy smart contracts, create email wallets, enable credit-card and cross chain payments, and use APIs to create, distribute, sell, store, and edit NFTs.

By abstracting away the core complexities of the Blockchain, Crossmint allows you to build NFT applications without requiring any blockchain experience or holding cryptocurrency, and making the blockchain invisible to end users.

Crossmint enables you to provide a Web2 experience for for your Web3 apps.

Check out [Crossmint's Docs](#) to get started.

## Crossmint Console

What you can achieve using Crossmint Console:

- Create and deploy NFT Collections.
- Create and airdrop NFTs.
- Generate No-code Storefront and No-code claims page.
- Accept credit card and cross-chain payments for your NFT Collections.
- Create and configure API Keys for Wallets and Minting.
- Create Webhooks to listen to your Crossmint collections's endpoint URL's triggered events.
- Whitelist domains and set up Redirect URLs for your NFT Collections' checkout.

Crossmint Console Please check out the [docs](#) to learn more. Click [here](#) to use Crossmint's Production Console and click [here](#) to use Crossmint's Staging Console.

## How to deploy an NFT smart contract on Arbitrum and enable credit card and cross-chain payments with no-code

Please checkout the step-by-step tutorial on the docs [here](#) and [here](#) .

Video Tutorial You can find a YouTube video for the same [here](#) .
