

Hello community,

I allow myself to come here to tell you about my problem which arose last week.

Indeed, I got hacked on my metamask and my 38 aave which were staked on the aave platform.

I traced the hacker's address via etherscan.

He transferred my aave from my address to his then left to stake the tokens on the platform.

I see them live.

How can I do?

Do you have any advice for me?

Thanks in advance;

THANKS

David
