

Hey all,

Keplr Wallet is now supporting Secret Network.

You can create a secret address and delegate your SCRT. The UI is super clean and easy to use. Keplr Wallet is developed by [Chainapsis](#), the team behind the IBC interaccount wallet development for [Cosmos IBC Game of Zones](#). More below on why I'm excited about interchain accounts

I just created an address and sent some SCRT to it and then staked the SCRT using Keplr. Super easy experience. You can check out [Keplr Portal](#) and Keplr [chrome browser extension](#) through these links. Maybe enjoy [some Pizza](#)

Here's a screenshot from the Keplr Portal

More on Interchain Accounts and why you should care about it?

We are all excited for a multi-chain Cosmos ecosystem. Secret Network is in a great position to provide privacy preserving computations for the entire Cosmos ecosystem. Image being able to create a privacy tokens ([called secret20](#)) based on ATOMs and using those secretATOMs in transaction or in application with full privacy. Right now this would require the end user to:

- have a Cosmos Wallet +
- have a SCRT wallet.
- send ATOMs to the Peg Zone on Cosmos hub
- mint secretATOMs

With Interchain accounts, the vision is to have 1 account for the entire Cosmos ecosystem. This is similar to how we are able to interact with the entire Ethereum ecosystem using one address.

It's very exciting to see a project that's pushing the innovation in Cosmos ecosystem support Secret Network!
