

Hey ApeCoin DAO – seeking your feedback and suggestions!

I recently submitted a proposal - AIP 187 - that focused on expanding web3 access by a) continuing to support education/skill-building from a Hackathon I'd designed and launched in Moldova last year; and b) expanding Hackathons / skill-building and education to other geographic locations.

Although it was rejected, the data [@Vulkan](#) shared on Twitter indicated that it would have passed if we used individual wallet %. (we don't, I know, but stick with me!).

It seems like there's some appetite for IRL events and ones with social impact. Both have the ability to onboard more people to \$Apecoin, increase awareness of the DAO, and bring more innovation into web3, which I'd love to do.

What would you suggest as a v.2 of the proposal? For instance, [@ssp1111](#) – in Spaces you and I discussed:

1. “shrink the change,” to focus on one event - rather than the original vision of three additional locations across a couple of continents.
2. “go local.” Rather than looking across geographies, start with an IRL social impact event in in the Northeast, US?
3. Other suggestions?

I'm curious about whether reconfiguring the shape / size would lead to a different outcome or if folks here have alternative perspectives. Appreciate thoughts on these ideas.

Thanks,
