

API Docs

Wormhole provides an HTTP API a developer can use to retrieve details about [VAAs](#) or the [Guardian Network](#) , among other things.

The primary API for wormhole is a read only HTTP server used to retrieve details about VAAs or the Guardian Network.

Documentation

See [this page](#) for details on the paths and parameters available.

Interactive documentation

A playground to try out some endpoints is available [here](#) and is great for quick experimentation.

Try it

RPC endpoints

Network URL Testnet <https://api.testnet.wormholescan.io/api/v1/> Mainnet <https://api.wormholescan.io/api/v1/>

Examples

Testnet Mainnet Get the first page of VAAs for Testnet Polygon (chain id: 5)

...

Copy `curl-s'https://api.testnet.wormholescan.io/api/v1/vaas/5\' -H'accept: application/json'`

``` Get the first page of VAAs for Polygon (chain id: 5)

...

Copy `curl-s'https://api.wormholescan.io/api/v1/vaas/5\' -H'accept: application/json'`

...

Guardian API

There is also a [Guardian Public RPC](#) endpoint which the [SDK](#) currently uses.
