

Hey, I am working on research regarding famous rollup solutions like Aztec. After browsing through Aztec's website and other related articles, I have some questions regarding governance and revenue that I'd like to ask in the community:

I understand that Aztec utilizes a 2-layer ZK-rollup, but could you please clarify the consensus mechanism employed by Aztec?

How does Aztec handle governance? Is it conducted through holding specific governance tokens for voting purposes?

Is there a validator staking mechanism within Aztec? If so, what tokens are required for staking?

Are there any statistics available for Aztec Network regarding fees and revenue?

I'd appreciate any insights the community can provide on these topics to better understand Aztec's operations. Thank you!
