

Hey Aave team - who is best to speak to regarding integration with Aave? My project is an AI/ML powered cross chain liquidity management protocol. It unifies liquidity across ecosystems.

We'd like to use your stack as a foundational part of the yield we generate and we'd like to have a conversation to see if you could provide some tech advice / support to integrate our protocol into your pools so we can draw yield from that and then we will be able to drive liquidity towards you. Could you advise?
