

I made the claim on January 20-21.

I was qualified with my TIA address and I had associated the claim with an ETH address in Metamask.

I had noted the address displayed (another one) and a DYM address.

Tuesday evening, I connected with my ETH address but I have 0 DYM. However, when I go to dym.fyi, I see the DYMs I'd seen displayed, but they're linked to the ETH address I don't know. What can I do?

Thanks.
