

Use GoQuorum or Besu with Tessera

You can use Tessera as the private transaction manager for [GoQuorum](#) or [Hyperledger Besu](#) . Get started with the following tutorials:

- [Create a privacy-enabled GoQuorum network](#)
- .
- [Send a private transaction on GoQuorum](#)
- .
- [Create a privacy-enabled Besu network](#)
- .
- [Configure a multi-tenant Besu network](#)
- .
- [Use the Besu multi-node example in the web3js-quorum library](#)
- .

note All Tessera nodes included in a private transaction must be running when the private transaction is sent. Otherwise, the transaction doesn't propagate and an error is returned. [Edit this page](#) Last updated on Oct 9, 2023 by [dependabot\[bot\]](#)
