

seid tx feegrant grant

Grant authorization to pay fees from your address. Note, the '--from' flag is ignored as it is implied from [granter].

Examples: tx feegrant grant cosmos1skjw... cosmos1skjw... --spend-limit 100stake --expiration 2022-01-30T15:04:05Z or tx feegrant grant cosmos1skjw... cosmos1skjw... --spend-limit 100stake --period 3600 --period-limit 10stake --expiration 36000 or tx feegrant grant cosmos1skjw... cosmos1skjw... --spend-limit 100stake --expiration 2022-01-30T15:04:05Z --allowed-messages "/cosmos.gov.v1beta1.MsgSubmitProposal,/cosmos.gov.v1beta1.MsgVote"

Usage: seid tx feegrant grant [granter_key_or_address] [grantee] [flags]

Flags: -a, --account-number uint The account number of the signing account (offline mode only) --allowed-messages strings Set of allowed messages for fee allowance -b, --broadcast-mode string Transaction broadcasting mode (sync|async|block) (default "sync") --dry-run ignore the --gas flag and perform a simulation of a transaction, but don't broadcast it (when enabled, the local Keybase is not accessible) --expiration string The RFC 3339 timestamp after which the grant expires for the user --fee-account string Fee account pays fees for the transaction instead of deducting from the signer --fees string Fees to pay along with transaction; eg: 10uatom --from string Name or address of private key with which to sign --gas string gas limit to set per-transaction; set to "auto" to calculate sufficient gas automatically (default 200000) --gas-adjustment float adjustment factor to be multiplied against the estimate returned by the tx simulation; if the gas limit is set manually this flag is ignored (default 1) --gas-prices string Gas prices in decimal format to determine the transaction fee (e.g. 0.1uatom) --generate-only Build an unsigned transaction and write it to STDOUT (when enabled, the local Keybase only accessed when providing a key name) -h, --help help for grant --keyring-backend string Select keyring's backend (os|file|wallet|pass|test|memory) (default "os") --keyring-dir string The client Keyring directory; if omitted, the default 'home' directory will be used --ledger Use a connected Ledger device --node string : to tendermint rpc interface for this chain (default "tcp://localhost:26657") --note string Note to add a description to the transaction (previously --memo) --offline Offline mode (does not allow any online functionality -o, --output string Output format (text|json) (default "json") --period int period specifies the time duration in which period_spend_limit coins can be spent before that allowance is reset --period-limit string period limit specifies the maximum number of coins that can be spent in the period -s, --sequence uint The sequence number of the signing account (offline mode only) --sign-mode string Choose sign mode (direct|amino-json), this is an advanced feature --spend-limit string Spend limit specifies the max limit can be used, if not mentioned there is no limit --timeout-height uint Set a block timeout height to prevent the tx from being committed past a certain height -y, --yes Skip tx broadcasting prompt confirmation

Global Flags: --chain-id string The network chain ID --home string directory for config and data (default "~/.sei") --log_format string The logging format (json|plain) --log_level string The logging level (trace|debug|info|warn|error|fatal|panic) --trace print out full stack trace on errors Last updated on July 1, 2024 [feegrant revoke](#)
