

In alignment with our commitment to transparency and community collaboration, we are happy to take a stride towards our [SUAVE Centauri](#)

vision by open-sourcing [suave-geth](#)

, an early version of the client that will power SUAVE and the MEVM ecosystem.

Contribute to flashbots/suave-geth development by creating an account on GitHub.

This early release is rooted in our goal to build in the open and foster a vibrant community around SUAVE. As we embark on this journey, we are keenly aware that this release does not yet meet every expectation. Nonetheless, it reflects our dedication to giving our community a transparent view of the current state and engaging them in addressing the open questions that remain. For a demonstration of capabilities and discussion check out the recording from our [EthCC SUAVE Salon](#).

Your insights, feedback, and collaborative spirit are not only welcomed, but greatly appreciated.
