

Hi,

I'm writing on the forum as I can't reconcile the payouts that I see on the dashboard with the ones that I see on my wallet.

For example, for round 685, just resolved my models should have earned a total of 2.69 NMR (see screenshot below).

However, if I check on the wallet page, I see the payout only for one model (sirbradflies_10) but nothing related to the other 3 (see screenshot below).

Am I missing something? All models have enabled the take profit option so I can't explain why only one model seems to be earning the reported NMR.

Thank you
