

Hello!

As I want to use for ERC20 token transfer - I uncommented these lines:

```
const tokenAddress = "0x...."; const engine: Base = new TransferERC20( provider, walletExecutor.address, RECIPIENT, tokenAddress
```

But when I run npm install

it stops with this error:

```
src/index.ts:82:28 - error TS2304: Cannot find name 'TransferERC20'.
```

How can I make it work?

Thank you!
