

Dear Lido Community,

welcome to our monthly news where we keep you up to date about our activities to create a safe Ethereum environment. Here is what happened since our last note:

#### AUTOMATED FALLBACK

A failover test to verify automated fallback of uplinks was done successfully on our bare metal hardware.

#### LIDO ON HOLESKY

We launched with Lido on Holesky with 500 keys.

#### LODESTAR ISSUES

There are Lodestar validator client issues with doppelgänger on Mainnet & Holesky, we are investigating them with Chainsafe. Some incompatibility might cause this, we are waiting for some later releases right now, following specs better.

#### NIMBUS ISSUE

The Nimbus issue investigation is still on-going.

[Find more information here](#)

#### DOPPELGÄNGER ISSUE

Teku hits doppelgänger protection when primary node isn't Teku.

#### HARDWARE EXTENSIONS

To keep pace with growing demand we added to our hardware bringing even more resilience to Lido validators.

#### RELEASE OF STEREUM 2.0.0

And we are happy to report that we released the new version of Stereum just yesterday! A big THANK YOU to the Lido community who contributed to this success with their grants!
