

Wallets

If you are an Ethereum wallet provider, you can integrate Lido staking into your app or website and get [Lido referral rewards](#) .

To participate in [Lido Referral Program](#) , apply for whitelisting on [Lido Forum](#) .

Your referral link

You can start referring people simply by sharing your special referral link to Lido [Staking Widget](#) . Your referral link looks like this `https://stake.lido.fi/?ref=YOUR_REWARDS_ADDRESS` where `YOUR_REWARDS_ADDRESS` is your Ethereum address or ENS name registered for the Lido Referral Program. Anyone who uses your link to stake will automatically set your rewards address as their referral.

For example, Vitalik's referral link would be <https://stake.lido.fi/?ref=0xAb5801a7D398351b8bE11C439e05C5B3259aeC9B> .

Integration options

There are multiple ways of integrating Lido staking into your app or website.

Adding a banner

You can add a banner to your website that redirects the user to Lido Staking Widget using your referral link. We have [several SVG banners](#) for you to choose from.

Example code,

```
< a
```

href

```
" https://stake.lido.fi/?ref=YOUR_REWARDS_ADDRESS "
```

```
< svg
```

width

```
" 100% "
```

Embedding Staking Widget

If you don't want users to leave your app to stake, you can embed Staking Widget via theiframe HTML tag and use your referral link as the source.

Example code,

```
< iframe src = " https://stake.lido.fi/?ref=YOUR_REWARDS_ADDRESS " title = " Lido Staking App " height = " 500 " width = " 100% " /> Preview,
```

For a full example, click[here](#) .

Interacting with Lido contract directly

If none of the options above suits you, you may choose to interact with Lido directly.

The[Lido contract](#) provides an easy interface for staking. All you need to do is call thesubmit(_referral) function, pass your rewards address as the argument and send ether value as the stake.

web3.js example,

import

Web3

from

"web3" ;

// using partial ABI for simplicity const

LIDO_ABI

=

[{ constant :

false , inputs :

[{

name :

"_referral" ,

type :

"address"

}] , name :

"submit" , outputs :

```
[ {  
  name :  
  "" ,  
  type :  
  "uint256"  
} ] , payable :  
true , stateMutability :  
"payable" , type :  
"function" } ] ;  
  
const  
LIDO_ADDRESS  
  
=  
"0xae7ab96520DE3A18E5e111B5EaAb095312D7fE84"  
  
const  
MY_REWARDS_ADDRESS  
  
=  
"YOUR_REWARDS_ADDRESS"  
  
async  
  
function  
stakeWithLido ( )  
{ // enable provider const  
[ user ]  
  
=  
await  
window . ethereum . request ( { method :  
"eth_requestAccounts" } ) ;  
  
// init web3 const web3 =  
new  
Web3 ( window . ethereum ) ; web3 . eth . Contract . setProvider ( web3 ) ;  
  
// init Lido const lidoContract =  
new  
web3 . eth . Contract ( LIDO_ABI ,  
LIDO_ADDRESS ) ;  
  
// stake const tx =  
await lidoContract . methods . submit ( MY_REWARDS_ADDRESS ) . send ( {  
from : user ,
```

```
value : web3 . utils . toWei ( "0.1" )
```

```
} ) ;
```

console . log (tx) ; } In case you wish to track on-chain submits, you need to subscribe to the following events,

- Submitted (address sender, uint256 amount, address referral)
- ,
- Transfer (address from, address to, uint256 value)
- ,
- TransferShares (address from, address to, uint256 sharesValue)
- .

See[Deployed Contracts](#) for Lido addresses on Mainnet.

For token integrations, see[Lido tokens integration guide](#) . [Edit this page](#) [Previous API](#) [Next SDKs](#)
