

Hello everyone,

We (Lampros Labs DAO) have created a live voting dashboard for LTIPP to track the voting of all 77 protocols in real-time.

This dashboard provides info about all the application's snapshot voting links, forum proposal application links, asks and live voting statuses for each proposal, all in one accessible dashboard.

Delegates can personalize the dashboard for them by creating a copy of the sheet, allowing them to update the status of voted proposals in the last column of the dashboard and see dynamic changes in cell background colours for the first four columns to track their own votes. (P.S. - Please note that while personal copies enable personalization, the sheet will not be updated for personal copies, the main public link remains active and is updated every 5 minutes for all community members.)

I would love to receive feedback, suggestions or any changes you would like to look into this sheet.

This sheet was completely inspired by the Voting Dashboard created by Inspex for STIP.

And lastly thanks to Applicant advisors and Council members for working tirelessly for the past few weeks to bring the best applications up for voting.

Check out the dashboard from the below link and do share your feedback for the dashboard through the comments below or through DM.
