

Hey there! You can use the header

method:

[Celestia Node API](#)

[Celestia Node API](#)

The Celestia Node API is the collection of RPC methods that can be used to interact with the services provided by Celestia Data Availability Nodes.

For more information on how to use the available APIs, please see:

docs.celestia.org

[RPC API | Build Modular.](#)

The developer documentation site for getting started building on the Celestia Network.
