

Params

The TokenFactory module uses params in this format:

```
// Params defines the parameters for the tokenfactory module. message
```

Params

```
{ // DenomCreationFee defines the fee to be charged on the creation of a new // denom. The fee is drawn from the  
MsgCreateDenom's sender account, and // transferred to the community pool. repeated
```

```
cosmos . base . v1beta1 . Coin denom_creation_fee =
```

```
