

Hi. I have 3 validators. I was using [P2P.org](https://p2p.org) to restake with EigenLayer. I need to unstake all 3 validators... and I thought it would be as easy as using the "withdraw" button on the [p2p.org](https://p2p.org) dashboard. They did all withdraw... but now on my EigenLayer dashboard it shows I have 96 Eth restaked on the beacon chain. When I click on the restake section... it shows I have 64 to unstake and 32 that can be redeposited.

I am trying to unstake all 96... and move them back to the original address I started with before I ever came to Eigenlayer.

What do I need to do?
